

Group 4

- Step 1: Plan out the design

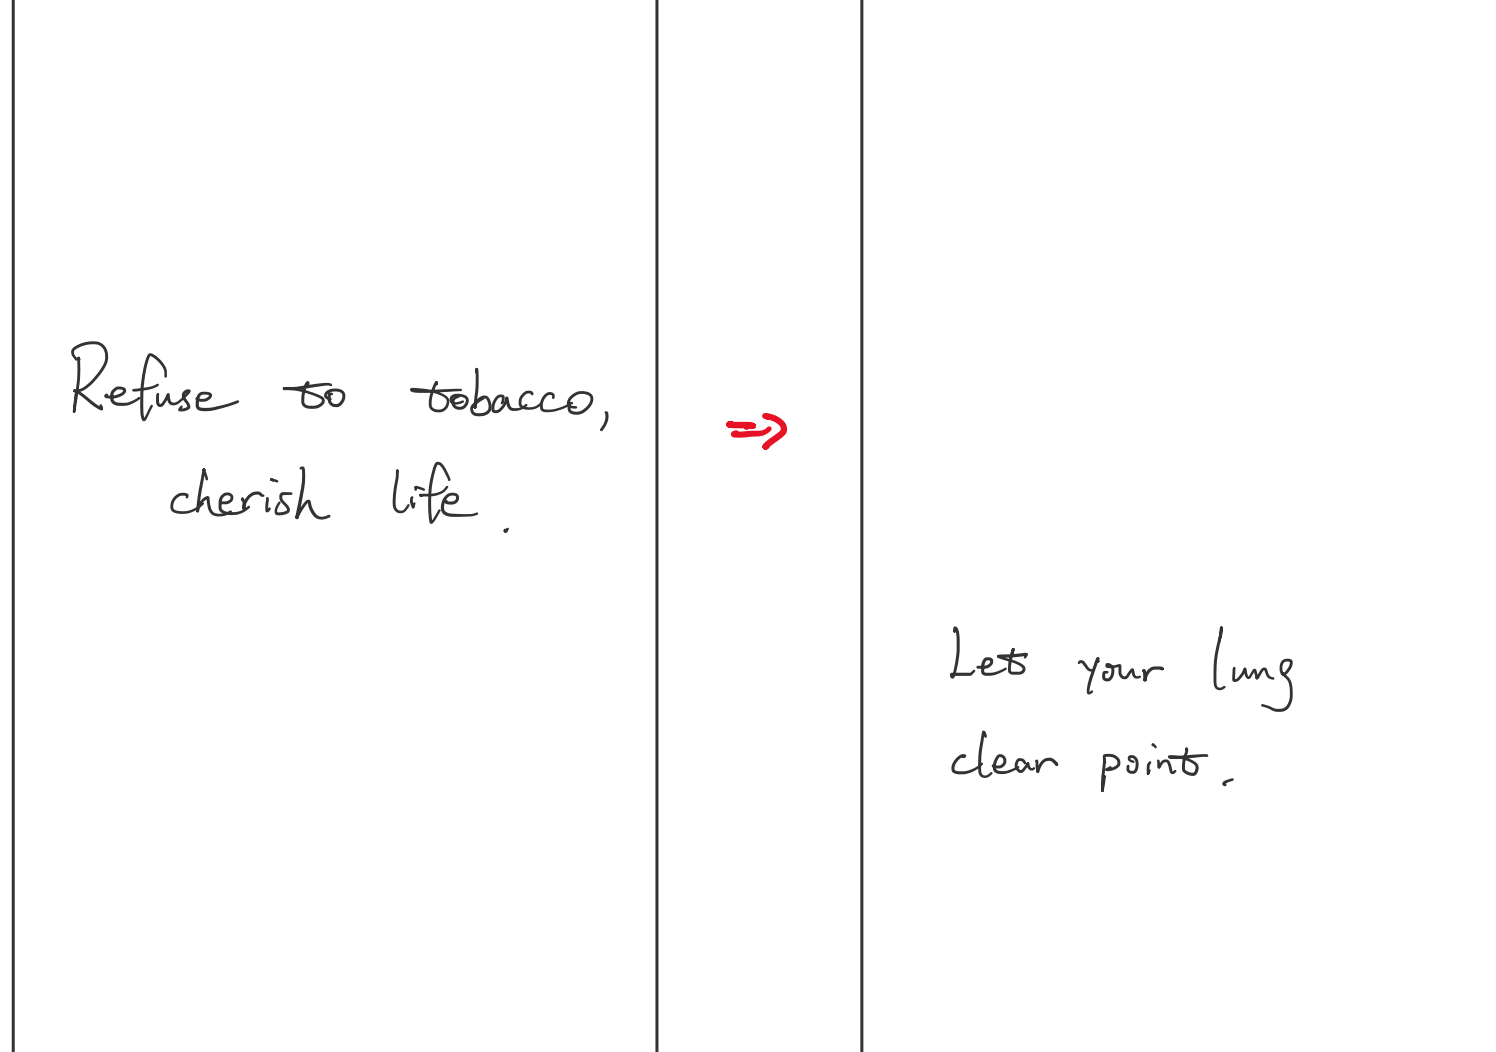

Both of us (Tianyi Ma and Tianjian Wei) have attended the meeting.

Our project is a quit smoking app, so we should focus on presenting our unique pages and functions that record smoke and help quit smoke. The 3 critical area we decide to present will be: 1. profile page that record the users smoking habit, which will be use to make quit smoking plans. 2. the record page that the user should go every time they smokes. 3. report and feedback page that tells users their real time progress. And 3 example tasks will be make a personal profile, smoke, and checking progress.

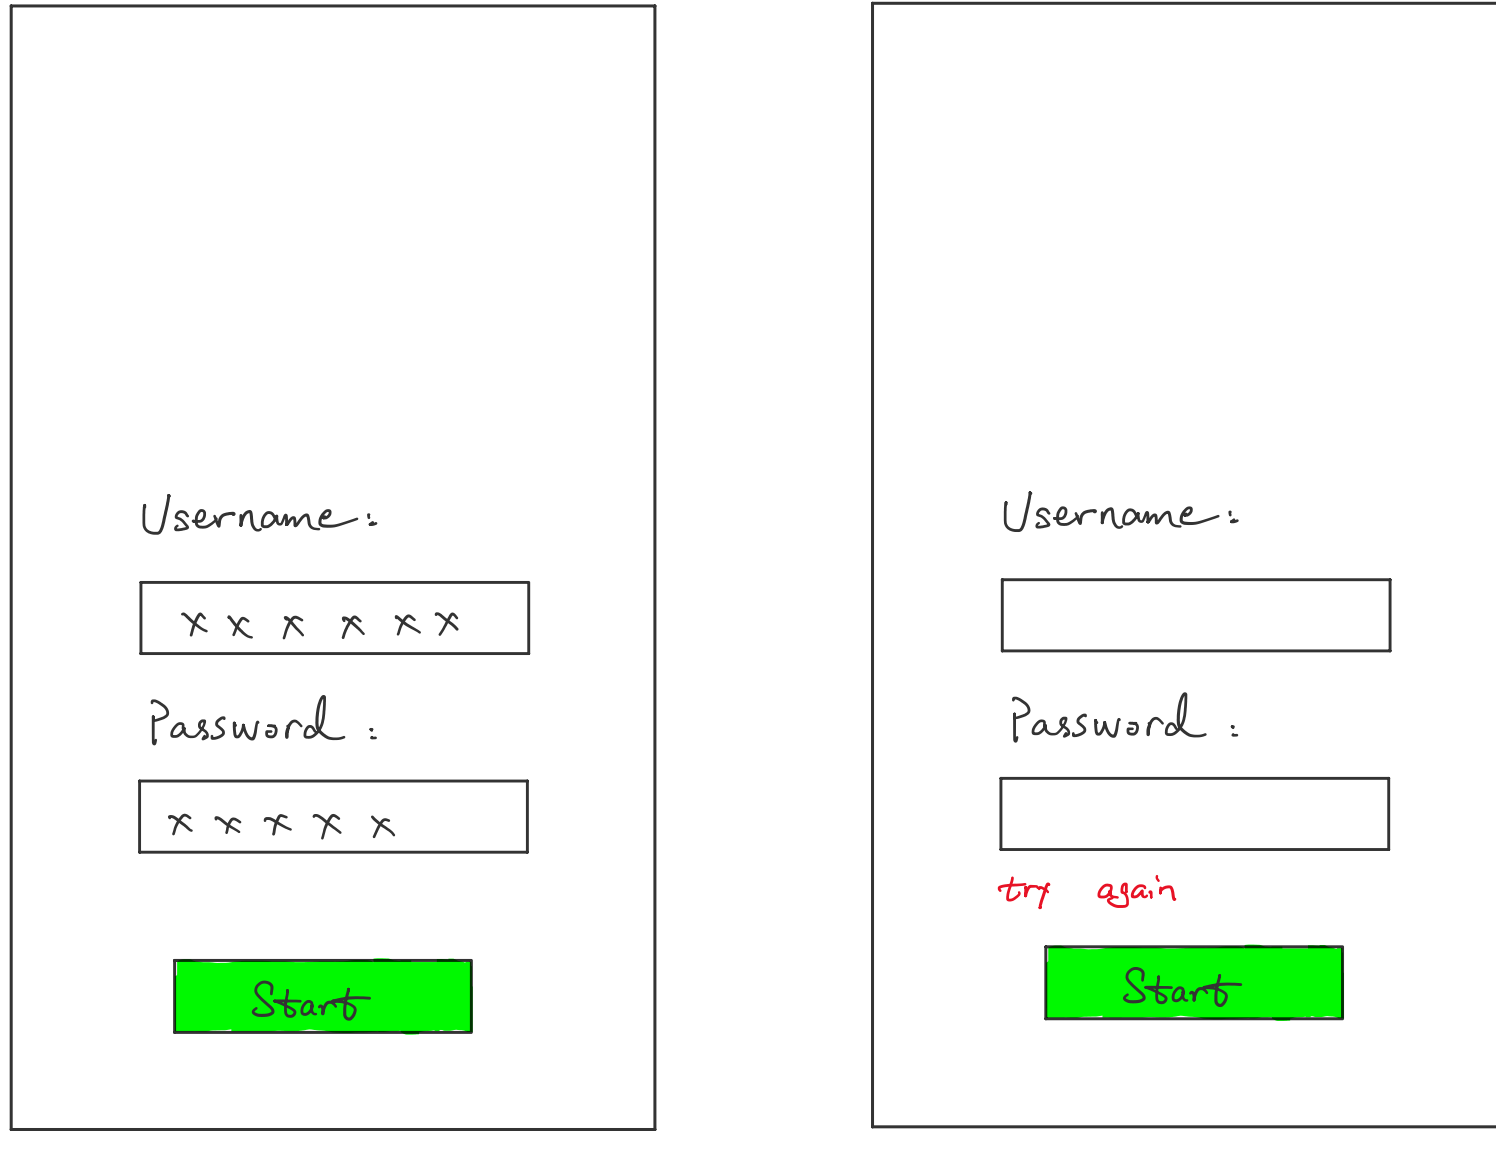

- Critical areas:
 - Profile page
 - Record page
 - Report and feedback page
- Example tasks:
 - Making personal profile
 - Smoke (Record)
 - Check the progress

- Step 2: Create paper prototype

1. Starting page :

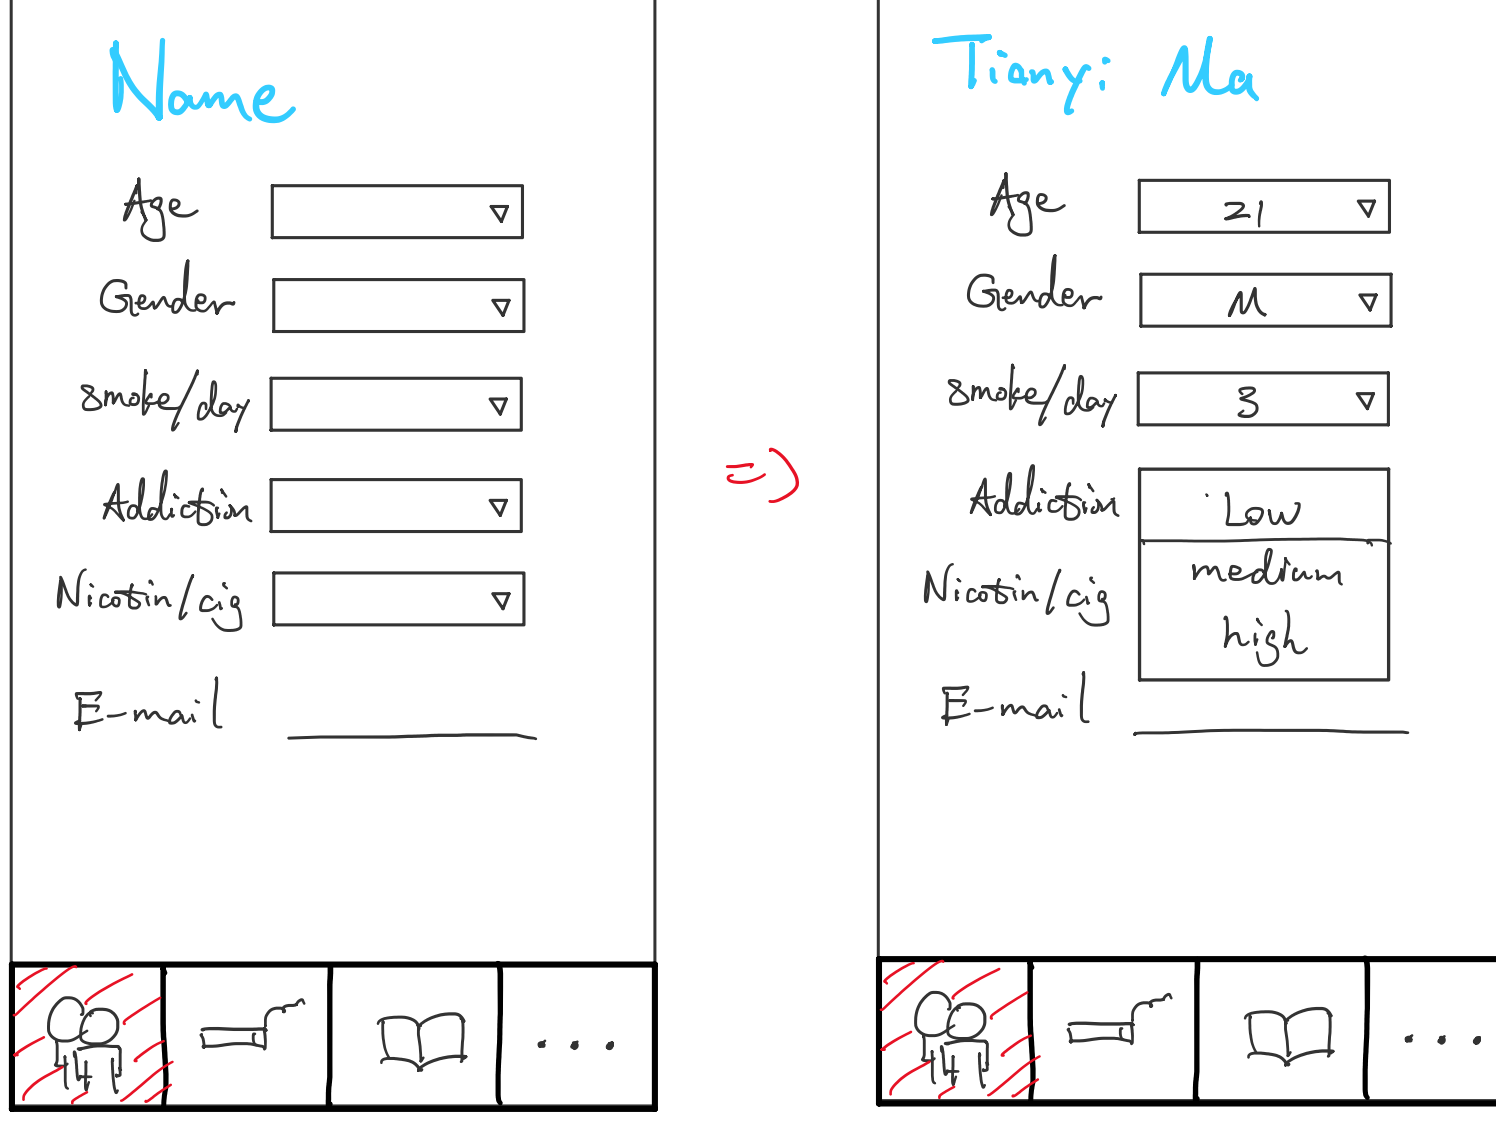

2. Login

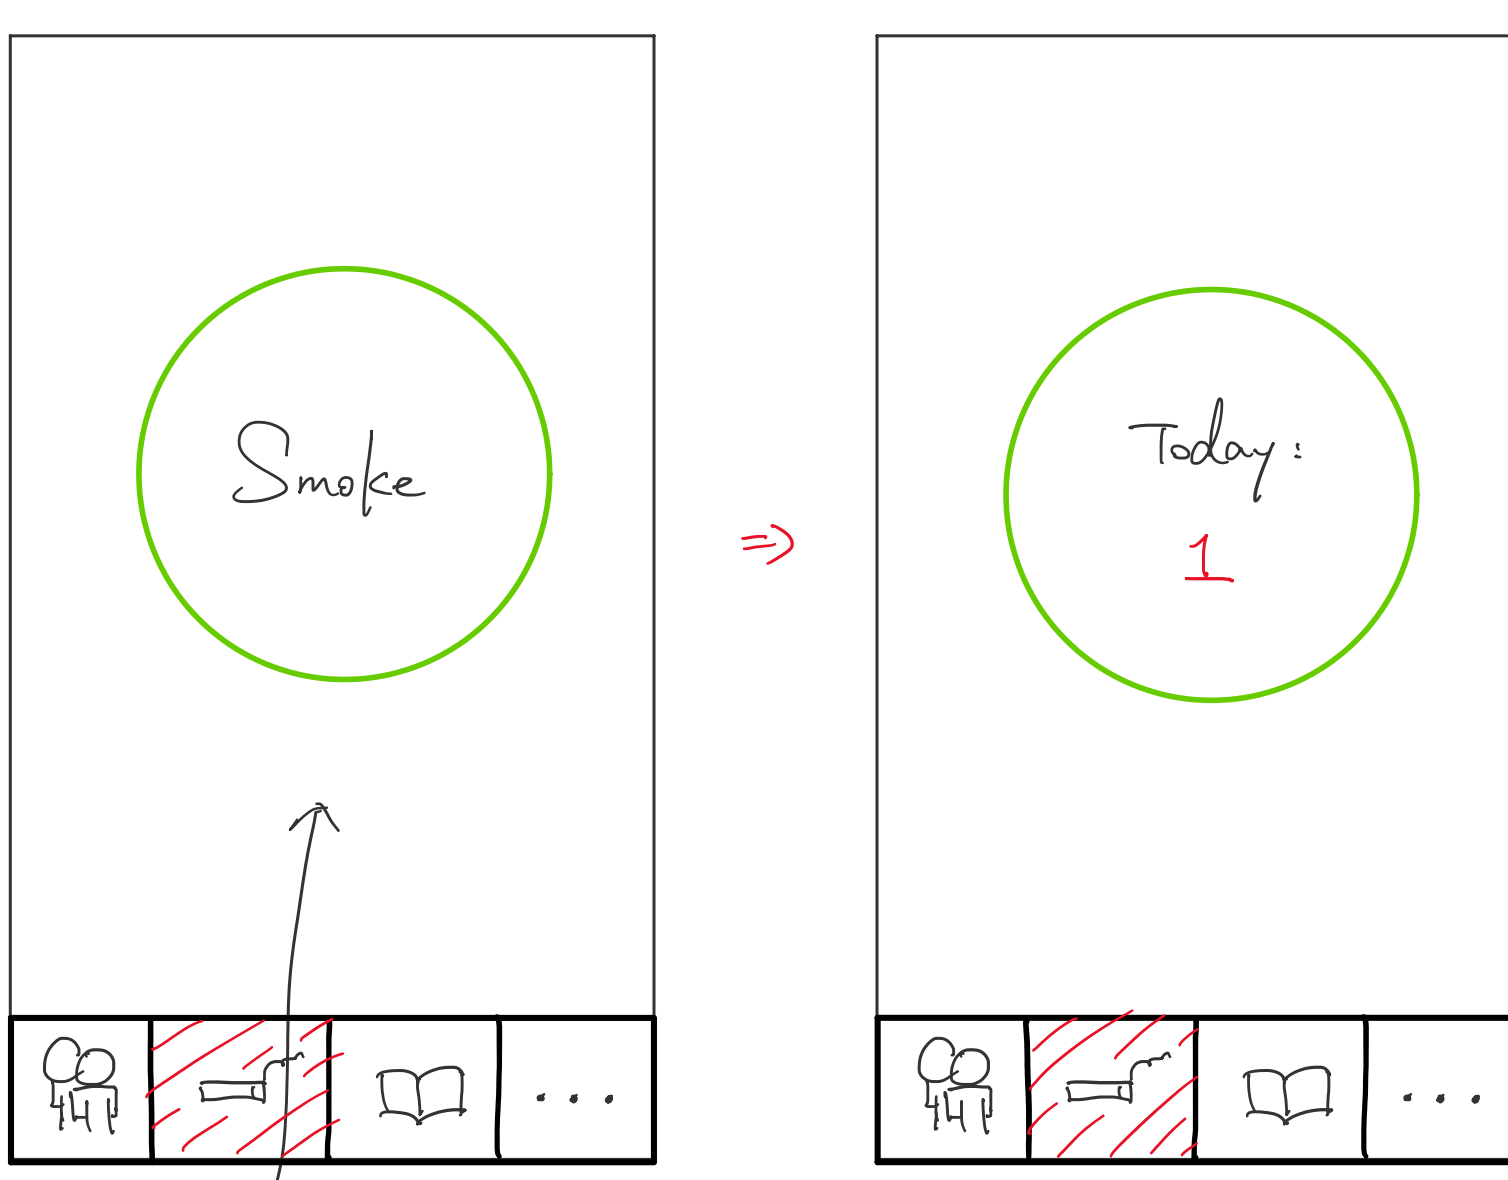

if the username & password aren't match ,

3. Personal Profile

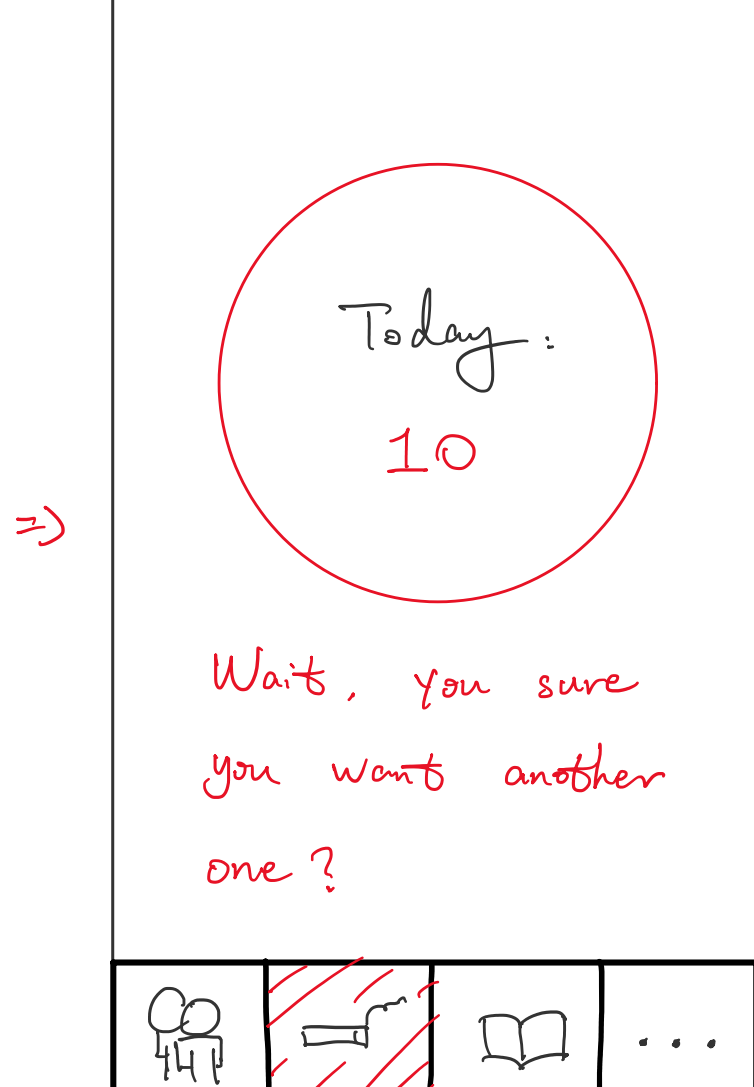

4. Main page (Record smoke)

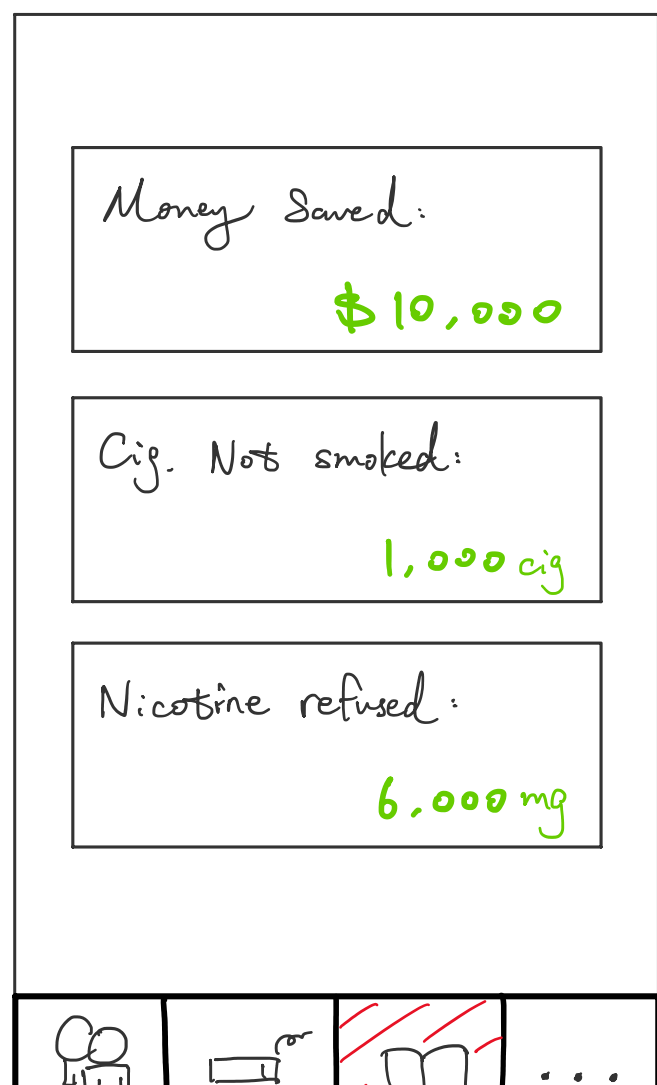

press the button to record smoking .

After every recording, it shows the # of cigarette the user had in that day .

if the user smokes too much , the button will turns red and a warning will show up .

5. Report

- Step 3:

Our prototype in Figma:
